

Pen's Parade and health-payment impoverishment - Nepal NLSS IV (2022/23)

Notes: Official NLSS pcep is post-payment welfare because health spending is excluded from the welfare aggregate. Pre-payment welfare is reconstructed by adding real per-capita oopg or OOP back to pcep. OOP equals annualized oopg plus annual NCD OOP, divided by household size and deflated by the Paasche price index. Poverty headcount is 17.27% pre-OOP and 20.27% post-payment, implying +3.00 pp OOP-associated impoverishment (~861,249 people; 270 households). OOPG-associated impoverishment is +1.47 pp (~421,261 people; 131 households). Source: NLSS IV; individual sampling weights.
